A lip gasket (1) designed to be mounted between the lid (2) and the bowl (3) of a cooking appliance (4) for the purpose of providing sealing between ~~said~~the lid (2) and the ~~said~~the bowl (3), ~~said~~the gasket (1) comprising at least first and second lips (1A, 1B), interconnected by a heel, ~~said~~the lips (1A, 1B) and ~~said~~the heel (1C) being such that, when the lips (1A, 1B) are brought together, they are suitable for defining a closed interstitial space (100), ~~said~~the gasket (1) being characterized in that it is provided with at least one geometrical discontinuity (80) suitable for acting, when the lips (1A, 1B) are brought together, to provide at least one path (9, 90) for putting ~~said~~the interstitial space (100) into communication with the outside. The invention applies to household cooking appliances.--
